Human (r)evolution

Genome of homo sapiens remains unchanged since ~ 10,000 years
Specialized in bipedal displacement and running

Physical (in)activity and health

Figure 6: Deaths attributed to 19 leading risk factors, by country income level, 2004.

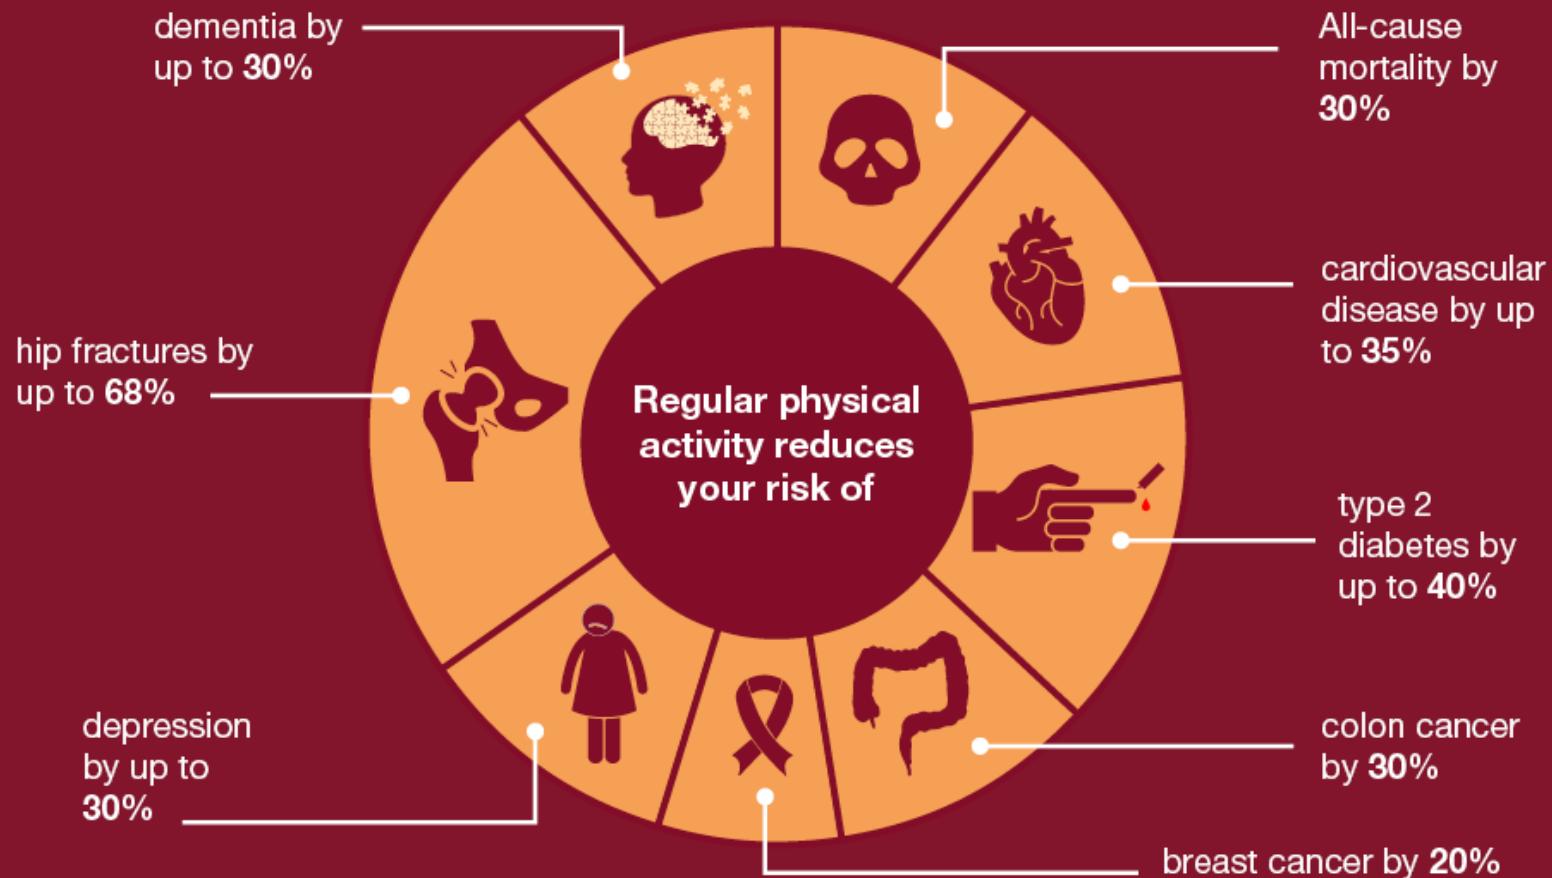

Physical (in)activity and health

Rank	Risk factor
1	Smoking
2	High BMI
3	High Blood pressure
4	High Fasting plasma glucose
5	Alcohol use
6	High total cholesterol
7	Low glomerular filtration
8	Low levels of physical activity
9	Drug Use
10	High intake of processed meat

Benefits of physical activity on health

What are the health benefits of physical activity?

Recommendations

Physical activity for early years (birth – 5 years)

Active children are healthy, happy, school ready and sleep better

Every movement counts

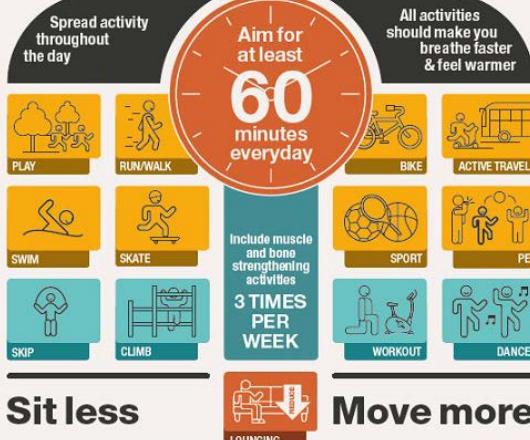

Move more. Sit less. Play together

UK Chief Medical Officers' Guidelines 2011 Start Active, Stay Active: www.bit.ly/startactive

Physical activity for children and young people (5–18 Years)

Be physically active

Find ways to help all children and young people accumulate at least 60 minutes of physical activity everyday

UK Chief Medical Officers' Guidelines 2011 Start Active, Stay Active: www.bit.ly/startactive

Physical activity benefits for adults and older adults

BENEFITS HEALTH	-40%
IMPROVES SLEEP	-35%
MAINTAINS HEALTHY WEIGHT	-30%
MANAGES STRESS	-25%
IMPROVES QUALITY OF LIFE	-20%

What should you do?

Something is better than nothing.
Start small and build up gradually:
just 10 minutes at a time provides benefit.
MAKE A START TODAY: it's never too late!

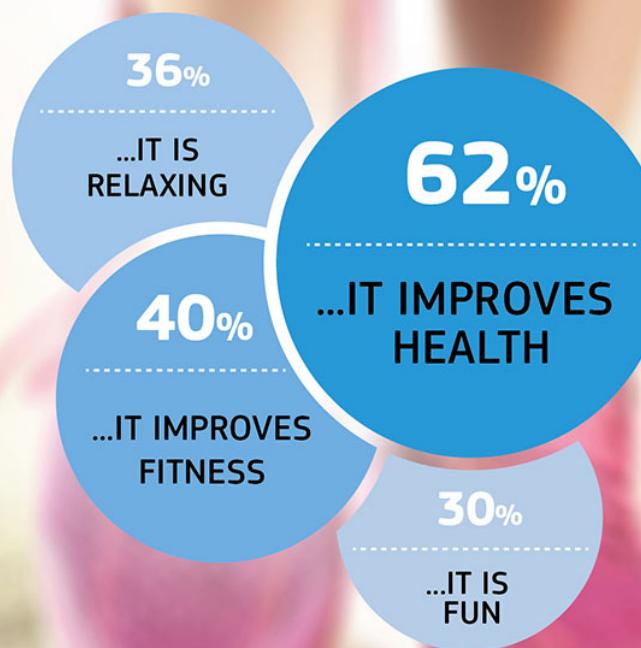

UK Chief Medical Officers' Guidelines 2011 Start Active, Stay Active: <http://bit.ly/startactive>

Some barriers...

WHY ARE EUROPEANS *ACTIVE*?

European Week of Sport

EUROPEANS ARE MOTIVATED BECAUSE...

EUROPEANS DO NOT PRACTISE SPORT DUE TO...

Sport-Santé history

Secondary and tertiary prevention

Obesity

Physical activity improves health by reducing the deleterious effects of obesity. In addition, combined with a diet, body weight loss is facilitated.

[Read More](#)

Cardiovascular diseases

After a cardiovascular event, physical activity limits strongly the risk of relapse and increases the vital prognostic.

[Read More](#)

Cancer

Physical activity is recommended during and after a cancer. The recommendations vary according to the types of cancer.

[Read More](#)

Neurologic/rare diseases

Physical activity cannot reverse the process of the most neurologic/rare diseases but limits the decrease of the quality of life.

[Read More](#)

Orthopedic disorders

Physical activity restores mobility and limits the increase of dependency. But, the exercises should be adapted to each pathologies.
